A SUSTAINABLE AND SENSUOUS PLACE

A brand new and redesigned Dome of Visions has opened its doors - located between the South Harbour district and the new part of town Aarhus Ø.

Dome of Visions in Aarhus is launched in an interesting collaboration between the Municipality of Aarhus, the Nordic construction company NCC and the Dome of Visions crew.

The Dome is a temporary and sensuous space presenting different events focused on sustainability, future construction, digitalisation, architecture, collaboration, culture, art and city life. With its temporary location at the Harbour the Dome is placed in the heart of the newly transformed neighborhood - between the old and new part of the city.

Welcome to Aarhus as European Capital of Culture 2017. With the theme *re-think* the municipality of Aarhus will host events and debates in city and in the Dome. The events will create the framework for the transformation and urban development of the city.

A GREEN BUBBLE

Dome of Visions is a dome-shaped greenhouse, which is about the same height as a three-storey house. The dome is transparent and contains a two-storey wooden house, which is sheltered from wind and water and surrounded by fragrant trees and plants. We monitor the indoor climate all year around and research on how the body sense the sensuous greenhouse space.

EXPERIMENT 1:1

Dome of Visions is action rather than words. The experiment will harvest new experiences with alternative constructions, materials, urban development, digitalisation, co-creation and new forms of collaboration. The dome will also pave the way for new visions by creating a framework for conferences and debates about the future of sustainable cities and buildings.

SPACES IN-BETWEEN

The Dome is a public space - a redesigned community centre, providing an idea on how to create an urban and vibrant city life.

We are working hard to present an academic, artistic and a cultural program and we invite you to occupy the space with us. The sky's the limit.

Feel free to contact us or drop by for a coffee if you have something on your mind. But hurry - Dome of Visions is only located at Pier 2 until summer 2018. Visit our website and discover the Dome calendar 2017/2018.

SHARED VISIONS

Dome of Visions as a concept is created in close collaboration between NCC and a group of visionary enthusiasts, artistic forces and ambitious architects driven by curiosity and passion for a more sustainable society. Dome of Visions is a third space and located between several worlds. It should be understood as such.

The architecture of Dome of Visions is based on the American architect, system theorist and futurist R. Buckminster Fuller's (1895-1983) ideas and mindset. Bucky studied minimalist constructions and is known for the geodesic dome and dreamed of creating more with less.

Dome 3.0 in Aarhus is developed and designed by the architect Kristoffer Tejlgaard (Atelier Kristoffer Tejlgaard). The architecture is re-designed based on experience from the previous two dome-versions 1.0 and 2.0
