THE DOME IN NUMBERS

Plot: 450 m²

Diameter: 24

Height: 10.5 m.

Hat: 32 m²

Internal house: 110 m²

Capacity: approx 150 seats

Ground floor: 75 seats

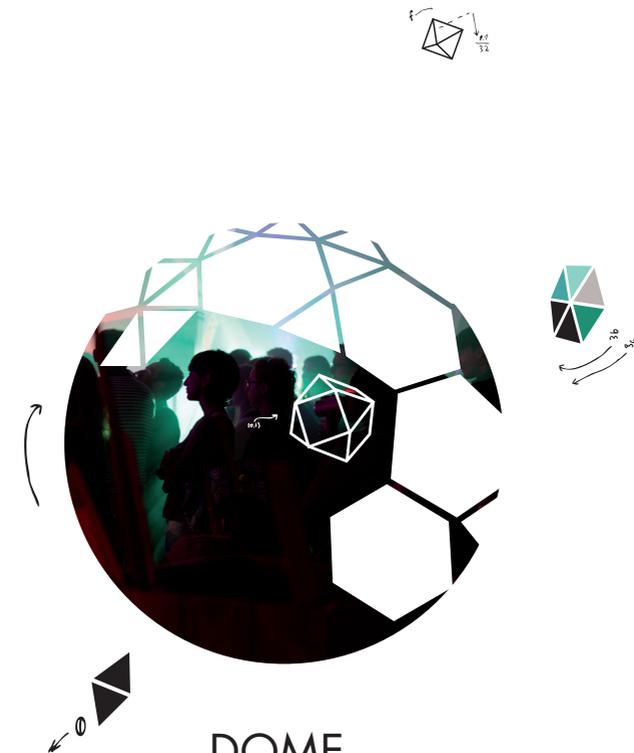

Meeting room: 6-8 seats

WE ARE LOCATED AT

Aarhus Havn, Pier 2

8000 Aarhus C

Dome of Visions @ Developed and powered by NXT

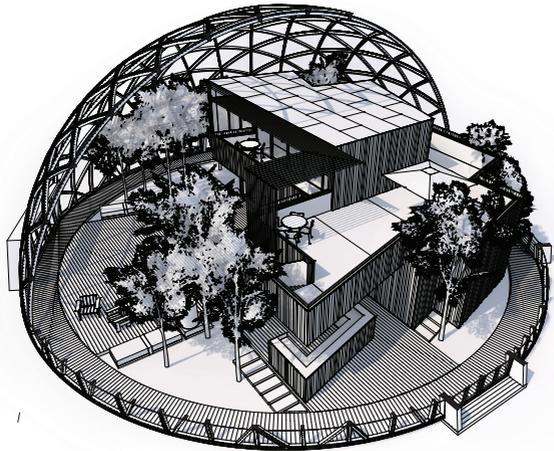

DOME OF VISIONS

PORT OF AARHUS, PIER 2

PARTNERS

Atelier Kristoffer Tejlgaard

A NEW MEETING PLACE IN AARHUS

Dome of Visions will be opening its doors to an updated and redesigned dome after the last visit to Aarhus in 2013. We will be inviting everyone into the new Dome of Visions at the Port of Aarhus, Pier 2, where the dome will be situated from late summer 2016 until 2018. Dome of Visions 3.0 has been launched in collaboration with the Municipality of Aarhus, NCC and the crew of Dome of Visions.

The Dome's space is a temporary sensual meeting place in the city, where we will be focusing on sustainable construction, the future of digitalisation, architecture, new forms of collaboration, diverse culture and city life. With its location at the Port of Aarhus, the dome literally lands in one of the newest areas of the city, which is undergoing a major development and transformation.

Aarhus has been appointed European Capital of Culture in 2017 and the municipality wants to use the space of the dome to debate and create the framework for the urban development that the city of Aarhus is currently undergoing. Dome of Visions will also house a large number of cultural events in 2017.

A GREEN BUBBLE

Dome of Visions is a dome-shaped greenhouse, which is about the same height as a three-storey house. The dome is transparent and contains a two-storey wooden house, which is sheltered from wind and water and surrounded by fragrant trees and plants. We monitor the inner climate throughout the year and experiment with being present and sensing inside a greenhouse.

EXPERIMENT 1:1

Dome of Visions is action rather than words. The experiment will harvest new experiences with alternative constructions, materials, urban development and forms of collaboration. The dome will also pave the way for new visions by creating a framework for conferences and debates about the future of sustainable cities and buildings.

SPACES IN-BETWEEN

The Dome is open to all - an up-graded community centre, providing a concrete idea of how the city's squares and spaces can be given a vibrant life.

We will be working hard to present a broad academic, artistic and cultural program when the dome lands on the harbor and we invite you and your city to occupy the space if you have something on your mind. Contact us. The sky's the limit in the dome.

SHARED VISIONS

Dome of Visions was created in close collaboration between NCC and a group of visionary enthusiasts, artistic forces and ambitious architects driven by curiosity and passion for a more sustainable society. Dome of Visions is located centrally between several worlds and should be understood as such.

The Dome of Visions design builds on the brainchild of by the American architect, system theorist and futurist R. Buckminster Fuller (1895-1983). Bucky studied minimalist constructions and is known for the geodesic dome and dreamed of creating more with less.

Dome of Visions 3.0 on The Port of Aarhus, Pier 2 was designed by the architect Kristoffer Tejlgaard (Atelier Kristoffer Tejlgaard) and builds on the experiences that have been gained through the work with the first two domes.
