SØREN KIERKEGAARDS PLADS

## PARTNERS

Architects: Benny Jepsen and Kristoffer Tejlgaard

## SØREN KIERKEGAARDS PLADS – THE CITY'S NEW CULTURAL SPACE

When DOME OF VISIONS arrives at Søren Kierkegaards Plads, it will help open the site's future as a new cultural venue in Copenhagen. Most Copenhageners and Danes know "The Black Diamond," the Royal Library, and many take advantage of its cultural offerings. But Søren Kierkegaards Plads, between the Diamond and Langebro is not an urban space that invites people to linger or enjoy outdoor cultural experiences. That will change in 2017, when the Brewery Site Project, with the new Danish Architecture Centre (DAC), is completed and gives the space a new setting. Søren Kierkegaards Plads can have a new role as a cultural meeting place by the harbour,

with room for people to have many more cultural experiences in the open air - and just enjoy Copenhagen life by the water. DOME OF VISIONS, by virtue of its partnership with The Royal Library, the City of Copenhagen and the Danish Architecture Centre, will help test how the space can be better used for cultural events and become a vibrant urban meeting place.

Visit the Black Diamond at [www.kb.dk/en/](http://www.kb.dk/en/)

## A GREEN BUBBLE

DOME OF VISIONS is a dome-shaped greenhouse the height of a three-storey house. The dome puts focus on sustainable construction, urban life, architecture and new ways of working together. The dome is transparent. Inside is a two-storey house, shielded from wind and rain, surrounded by fragrant trees and plants.

Copenhagen was awarded the EU's prestigious European Green Capital Award 2014 and will put the city on the world map with the Sharing Copenhagen 2014 project.

## EXPERIMENT 1:1

DOME OF VISIONS is about action over talk, and is aimed at reaping new knowledge and experience in alternative designs, materials and ways of working together. At the same time, the Dome will show the way to new visions, by being the setting for conferences and debates about the sustainable cities and buildings of the future.

## THE CITY'S "MIDDLE" SPACES

NCC, the project sponsor, finds in DOME OF VISIONS inspiration for new ways to reside, build and live. The Dome is also an example of how a city's many "middle" spaces (building sites, plazas and parks) can be supplemented with a temporary, unusual and vibrant life.

DOME OF VISIONS will stand at Søren Kierkegaards Plads until 1 April 2015.

DOME OF VISIONS builds on the ideas of the American futurist and architect, Buckminster Fuller (1895-1983). He studied minimalist construction in which the geodesic dome is used as an outer façade. He dubbed the earth "Spaceship Earth" and developed sustainable solutions decades before that concept became entered public debate.
